Lung Cancer Screening Pilot for People at High Risk
Level 1 Screening Pathway
Last updated: August 2019

*Occurs if a Lung-RADS™ score of 4B is assigned to a new large nodule identified on an annual recall low-dose computed tomography (CT) scan and the reporting radiologist suspects an infection or inflammation.

Note: The categories “probably benign,” “suspicious” and “very suspicious” are based on Lung-RADS™ (version 1.1).
