# CAPE+TRAS Regimen

**Capecitabine-Trastuzumab**

## Disease Site
Breast

## Intent
Palliative

## Regimen Category
Evidence-Informed:

Regimen is considered appropriate as part of the standard care of patients; meaningfully improves outcomes (survival, quality of life), tolerability or costs compared to alternatives (recommended by the Disease Site Team and national consensus body e.g. pan-Canadian Oncology Drug Review, pCODR). Recommendation is based on an appropriately conducted phase III clinical trial relevant to the Canadian context OR (where phase III trials are not feasible) an appropriately sized phase II trial. Regimens where one or more drugs are not approved by Health Canada for any indication will be identified under Rationale and Use.

## Rationale and Uses
For treatment of breast cancer in patients who progressed after prior chemotherapy and have had prior trastuzumab in the metastatic setting (patients may not have had progression on lapatinib). See NDFP eligibility form for additional funding criteria.

## Supplementary Public Funding
- **capecitabine**
  - ODB - General Benefit (capecitabine) ([ODB formulary](#))
- **trastuzumab**
  - New Drug Funding Program (Trastuzumab - Second Line - Metastatic Breast Cancer) ([NDFP Website](#))

Any use of the information is subject, at all times, to CCO’s Terms and Conditions.

CCO Formulary - April 2018

Page 1 of 12
B - Drug Regimen

**capecitabine**  
1000-1250* mg /m² PO  
BID, Days 1 to 14  
(Outpatient prescription in multiples of 150mg or 500mg tablets)  

*May use 1000 mg/m² BID Days 1 to 14 in heavily pretreated patients. Health Canada approved dose is 1250 mg/m² BID Days 1 to 14

**trastuzumab**  
8 mg /kg  
IV loading dose  
Day 1 (cycle 1)

followed by (starting cycle 2):

**trastuzumab**  
6 mg /kg  
IV maintenance dose  
Day 1

C - Cycle Frequency

**REPEAT EVERY 21 DAYS**

Until disease progression or unacceptable toxicity

D - Premedication and Supportive Measures

**Antiemetic Regimen:**  
Low

**Other Supportive Care:**

- Topical emollients (e.g. hand creams, udder balm) therapy may ameliorate the manifestations of hand-foot syndrome in patients receiving capecitabine.
- Supportive care should be provided, including loperamide for diarrhea.
- To prevent recurrence of infusion-associated reactions with trastuzumab, acetaminophen and diphenhydramine may be given as pre-medication. Refer to the [Trastuzumab](#) drug monograph for full details.
E - Dose Modifications

Doses should be modified according to the protocol by which the patient is being treated. The following recommendations have been adapted from clinical trials or product monographs and may be considered.

**Dosage with toxicity**

**Capecitabine:**

Do not start treatment with capecitabine unless baseline neutrophil counts are $\geq 1.5 \times 10^9/L$ and/or platelet counts of $\geq 100 \times 10^9/L$. Patients should be informed of the need to interrupt treatment immediately if moderate or severe toxicity occurs. Supportive care should be provided, including loperamide for diarrhea. Doses should not be re-escalated if reduced for toxicity. Missed or omitted doses of capecitabine should not be replaced.

Dose modifications are mandatory for gastrointestinal, dermatological toxicity, neurotoxicity and hyperbilirubinemia. Practitioner may elect not to reduce dose for other toxicities unlikely to become serious or life-threatening.

<table>

<td>Discontinue treatment permanently</td>
<td>--</td>
</tr>
</tbody>
</table>
Grade 4

1st appearance, including SJS or TEN, OR cardiotoxicity OR acute renal failure

- Discontinue permanently
- OR
  - If physician deems it to be in the patient's best interest to continue and no evidence of Stevens-Johnson syndrome or toxic epidermal necrolysis, interrupt until resolved to grade 0-1.

2nd appearance OR any occurrence of confirmed leukoencephalopathy

- Discontinue permanently

Discontinue permanently OR 50%

---

**Dosage in myelosuppression:**

Modify according to protocol by which patient is being treated; if no guidelines available, refer to Appendix 6 "Dosage Modification for Hematologic and Non-Hematologic Toxicities." Hold capecitabine during a treatment cycle in the presence of grade 3 or 4 hematologic toxicity.

---

**Cardiotoxicity associated with trastuzumab:**

**Product Monograph Recommendations**

- Trastuzumab should be held with a fall in LVEF (if LVEF falls ≥10 points from baseline and/or if LVEF falls to < 50%). Repeat LVEF in 3 weeks and consider discontinuing. Discontinue if clinically significant cardiac dysfunction or cardiac failure develops.

**Canadian Consensus Guidelines:** Discontinue if symptomatic.

Management of trastuzumab therapy in adjuvant breast cancer patients with asymptomatic decreases in LVEF (Mackey et al 2008):

<table>
<thead>
<tr>
<th>Relationship of LVEF to Lower Limit of Normal (LLN)</th>
<th>Trastuzumab dose modification based on asymptomatic LVEF decrease from baseline</th>
</tr>
</thead>
<tbody>
<tr>
<td>≤ 10 percentage points</td>
<td>≤ 10 percentage points</td>
</tr>
<tr>
<td>10-15 percentage points</td>
<td>10-15 percentage points</td>
</tr>
<tr>
<td>≥ 15 percentage points</td>
<td>≥ 15 percentage points</td>
</tr>
<tr>
<td>Within facility’s normal limits</td>
<td>Hold and repeat MUGA/ECHO after 4 weeks</td>
</tr>
<tr>
<td>Continue</td>
<td>Continue</td>
</tr>
<tr>
<td>1-5% below LLN</td>
<td>Continue ¹</td>
</tr>
<tr>
<td>≥ 6% below LLN</td>
<td>Continue and repeat MUGA/ECHO after 4 weeks ³</td>
</tr>
</tbody>
</table>

¹ Consider cardiac assessment and starting ACEI therapy
² After 2 holds, consider permanent trastuzumab discontinuation
³ Start ACEI therapy and refer to cardiologist

**Hypersensitivity with trastuzumab:**

<table>
<thead>
<tr>
<th>Toxicity</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mild hypersensitivity reaction</td>
<td>↓ infusion rate (and/ or hold) and use beta-agonists, antihistamines, antipyretics, and/or corticosteroids as appropriate. Consider premedication for next infusion.</td>
</tr>
<tr>
<td>Moderate hypersensitivity reaction</td>
<td>Hold and use beta-agonists, antihistamines, antipyretics, and/or corticosteroids as appropriate; complete infusion at ↓ rate if possible. Use premedication for next infusion.</td>
</tr>
<tr>
<td>Severe hypersensitivity reaction or Pulmonary Toxicity</td>
<td>Hold and manage symptoms aggressively with beta-agonists, antihistamines, antipyretics, and/or corticosteroids. Discontinue permanently and do not rechallenge</td>
</tr>
</tbody>
</table>

**Hepatic Impairment**

**Capecitabine:**

In patients with mild to moderate hepatic impairment, exposure is increased but no dose adjustment is necessary, although caution should be exercised. Use dose modification table above for increases in bilirubin. The use of capecitabine in patients with severe hepatic impairment has not been studied.

**Trastuzumab:**

No adjustment required.
Renal Impairment

Capecitabine:

Moderate renal impairment results in an increase in severe toxicity.

<table>
<thead>
<tr>
<th>Creatinine Clearance (mL/min)</th>
<th>% of starting dose</th>
</tr>
</thead>
<tbody>
<tr>
<td>51 - 80</td>
<td>100 % with close monitoring</td>
</tr>
<tr>
<td>30 - 50</td>
<td>75 % (use with caution)</td>
</tr>
<tr>
<td>&lt;30</td>
<td>CONTRAINDIATED</td>
</tr>
</tbody>
</table>

Trastuzumab:

No adjustment required. The disposition of trastuzumab is not altered based on serum creatinine.

Dosage in the Elderly

Capecitabine:

No dose adjustment for the starting dose is required, but patients should be closely monitored and dose modification should be performed as described above. Older patients are more susceptible to the effects of fluoropyrimidine-based therapies with increased grade 3 / 4 adverse effects, especially when used in combination.

Trastuzumab:

No adjustment required; the risk of cardiac dysfunction and myelosuppression may be increased in elderly patients. The reported trials did not determine differences in efficacy between patients > 65 years versus younger patients.
Refer to capecitabine, trastuzumab, drug monograph(s) for additional details of adverse effects

<table>

G - Interactions

Refer to capecitabine, trastuzumab drug monograph(s) for additional details

- Avoid concomitant administration of capecitabine with sorivudine or analogues given increased risk of capecitabine toxicity (may be fatal). Wait at least 4 weeks after sorivudine treatment before starting capecitabine.
- Avoid concomitant administration of capecitabine with phenytoin as capecitabine may increase phenytoin levels. Monitor phenytoin levels if co-administered.
- Caution and monitor INR/PT when co-administered with warfarin
- Caution and monitor for reduced effectiveness of capecitabine when co-administered with proton-pump inhibitors. Consider switching to an antacid if appropriate.
Avoid concomitant administration of trastuzumab with anthracyclines and other cardiotoxic drugs. Use extreme caution with anthracyclines for up to 27 weeks after stopping trastuzumab.

Refer to capecitabine, trastuzumab drug monograph(s) for additional details

**Administration: capecitabine**

- Oral self-administration; drug available by outpatient prescription.
- Clinical studies performed with capecitabine administered 30 minutes after food. Administering capecitabine on an empty stomach may result in slightly higher exposure and thus toxicity.
- If a capecitabine dose is missed, skip this and give the next dose at the usual time. Missed or omitted doses should not be replaced.
- Store tablets at 15ºC to 30ºC in the original package.

**Administration: trastuzumab**

**NOTE:** Herceptin® (trastuzumab) and Kadcyla® (trastuzumab emtansine) are NON-INTERCHANGEABLE. There have been fatal reports where the incorrect trastuzumab product was administered to patients with breast cancer in the clinical trials setting.
- Mix in 250 mL bag NS. Do not use D5W as it causes protein aggregation. Do not shake.
- Infuse loading dose IV over 90 minutes; subsequent infusions may be given over 30 minutes if the initial loading dose is well-tolerated.
- **DO NOT ADMINISTER AS AN IV PUSH OR BOLUS.**
- Should not be mixed or diluted with other drugs.
- Diluent supplied - Bacteriostatic Water for Injection (BWFI) - contains benzyl alcohol 1.1%; if patient is hypersensitive to benzyl alcohol, may reconstitute with Sterile Water for Injection, but must be used immediately and discard unused portion.
- Solution reconstituted with the supplied BWFI is stable up to 28 days refrigerated.
- Do not freeze the reconstituted solution.

**Contraindications:**

- Patients who have a known hypersensitivity to capecitabine, its excipients, or 5-fluorouracil
- Patients with known hypersensitivity to trastuzumab, Chinese Hamster Ovary (CHO) cell proteins, or any components of this product.
- Patients with known near or complete absence of DPD (dihydropyrimidine dehydrogenase) deficiency
- Concomitant use with sorivudine or related analogues (i.e. brivudine), given potential fatal drug interaction
Trastuzumab should only be used in patients whose tumours overexpress HER2
Patients with severe renal impairment (CrCl <30 mL/min)
Capecitabine contains lactose; avoid in patients with hereditary galactose/glucose/lactase disorders

Precautions:

- Patients with risk factors for dehydration, pre-existing renal dysfunction or on nephrotoxic agents
- Patients with a history of cardiovascular disease
- Patients with partial DPD deficiency - use with extreme caution
- The risk of cardiotoxicity must be weighed against the potential benefits of treatment, especially in older patients, patients with pre-existing cardiac disease (including LVEF < 55%) and patients who have had prior cardiotoxic therapy. Note: in the adjuvant trials, patients with cardiac risk factors were excluded from the trials.
- Exercise caution in patients with pre-existing pulmonary disease or patients with extensive pulmonary tumour involvement, as they may experience more severe lung toxicities.
- Use with caution before or after anthracyclines (for up to 27 weeks after trastuzumab discontinuation due to long half-life).

Pregnancy & Lactation:

- These drugs are not recommended for use in pregnancy. Adequate contraception should be used by both sexes during treatment, and for at least 7 months after the last dose.
- Breastfeeding is not recommended.

I - Recommended Clinical Monitoring

Treating physicians may decide to monitor more or less frequently for individual patients but should always consider recommendations from the product monograph.

Recommended Clinical Monitoring

- CBC; baseline and before each cycle
- Cardiac assessment, including evaluation of left ventricular function (Echocardiogram or MUGA scan); more frequent with asymptomatic reductions in LVEF; baseline, q3 months during treatment, then q6 months after trastuzumab discontinuation x2 years (and annually up to 5 years after last trastuzumab dose in adjuvant breast cancer patients who received anthracyclines), also as clinically indicated
- INR and/or PT; Baseline and regular if on anticoagulants
Renal function tests; baseline and before each cycle
Toxicity ratings of infusion-associated symptoms with trastuzumab (especially first infusion); Close monitoring at each visit
Clinical toxicity assessment for diarrhea, dehydration, infection, bleeding, stomatitis, rash or hand-foot syndrome, cardiac failure, pulmonary, hepatic and neurotoxicity; At each visit
Grade toxicity using the current NCI-CTCAE (Common Terminology Criteria for Adverse Events) version

Suggested Clinical Monitoring

Liver function tests; Baseline and regular (if severe organ failure suspected)

J - Administrative Information

Outpatient prescription for home administration (capecitabine)

Pharmacy Workload (average time per visit) 19.589 minutes
Nursing Workload (average time per visit) 48.333 minutes

Regimen Abstracts

A Regimen Abstract is an abbreviated version of a Regimen Monograph and contains only top level information on usage, dosing, schedule, cycle length and special notes (if available). It is intended for healthcare providers and is to be used for informational purposes only. It is not intended to constitute or be a substitute for medical advice, and all uses of the Regimen Abstract are subject to clinical judgment. Such information is provided on an “as-is” basis, without any representation, warranty, or condition, whether express, or implied, statutory or otherwise, as to the information’s quality, accuracy, currency, completeness, or reliability, and Cancer Care Ontario disclaims all liability for the use of this information, and for any claims, actions, demands or suits that arise from such use.

Information in regimen abstracts is accurate to the extent of the ST-QBP regimen master listings, and has not undergone the full review process of a regimen monograph. Full regimen monographs will be published for each ST-QBP regimen as they are developed.

Regimen Monographs

Refer to the New Drug Funding Program or Ontario Public Drug Programs websites for the most up-to-date public funding information.

The information set out in the drug monographs, regimen monographs, appendices and symptom management information (for health professionals) contained in the Drug Formulary (the "Formulary") is intended for healthcare providers and is to be used for informational purposes only. The information is not intended to cover all possible uses, directions, precautions, drug interactions or adverse effects of a particular drug, nor should it be construed to indicate that use of a particular drug is safe, appropriate or effective for a given condition. The information in the Formulary is not intended to constitute or be a substitute for medical advice and should not be relied upon in any such regard. All uses of the Formulary are subject to clinical judgment and actual prescribing patterns may not follow the information provided in the Formulary.

The format and content of the drug monographs, regimen monographs, appendices and symptom management information contained in the Formulary will change as they are reviewed and revised on a periodic basis. The date of last revision will be visible on each page of the monograph and regimen. Since standards of usage are constantly evolving, it is advised that the Formulary not be used as the sole source of information. It is strongly recommended that original references or product monograph be consulted prior to using a chemotherapy regimen for the first time.

Some Formulary documents, such as the medication information sheets, regimen information sheets and symptom management information (for patients), are intended for patients. Patients should always consult with their healthcare provider if they have questions regarding any information set out in the Formulary documents.

While care has been taken in the preparation of the information contained in the Formulary, such information is provided on an “as-is” basis, without any representation, warranty, or condition, whether express, or implied, statutory or otherwise, as to the information’s quality, accuracy, currency, completeness, or reliability.

CCO and the Formulary’s content providers shall have no liability, whether direct, indirect, consequential, contingent, special, or incidental, related to or arising from the information in the Formulary or its use thereof, whether based on breach of contract or tort (including negligence), and even if advised of the possibility thereof. Anyone using the
information in the Formulary does so at his or her own risk, and by using such information, agrees to indemnify CCO and its content providers from any and all liability, loss, damages, costs and expenses (including legal fees and expenses) arising from such person’s use of the information in the Formulary.
