ZOLE Regimen
Zoledronic Acid

Disease Site: Breast

Intent: Adjuvant

Regimen Category: Evidence-Informed:
Regimen is considered appropriate as part of the standard care of patients; meaningfully improves outcomes (survival, quality of life), tolerability or costs compared to alternatives (recommended by the Disease Site Team and national consensus body e.g. pan-Canadian Oncology Drug Review, pCODR). Recommendation is based on an appropriately conducted phase III clinical trial relevant to the Canadian context OR (where phase III trials are not feasible) an appropriately sized phase II trial. Regimens where one or more drugs are not approved by Health Canada for any indication will be identified under Rationale and Use.

Rationale and Uses:
For the adjuvant treatment of breast cancer in post-menopausal women.

Notes:
Adjuvant zoledronic acid should be used in post-menopausal women only, including women who are prescribed GnRH analogs for ovarian suppression. In this case, zoledronic acid should be given for the same duration as the GnRH analog. Ideally, treatment should be initiated within 12 weeks of completion of adjuvant chemotherapy or radiation. However, consideration should be given to the late initiation of treatment in women who may have been eligible after December 2013, when the results of the systematic review (supporting use) were first presented.
B - Drug Regimen

**zoledronic acid** 4 mg IV in 100 mL NS or D5W over 15 minutes

C - Cycle Frequency

**REPEAT EVERY 6 MONTHS** for 3 to 5 years unless unacceptable toxicity. For patients receiving GnRH analogs, zoledronic acid should be given for the same duration as the GnRH analog.

D - Premedication and Supportive Measures

**Other Supportive Care:**
All patients, especially those with hypercalcemia, should be adequately hydrated. Calcium and Vitamin D supplements should be considered in patients who have normal calcium levels with no history of hypercalcemia. (Refer to zoledronic acid monograph).

E - Dose Modifications

Doses should be modified according to the protocol by which the patient is being treated. The following recommendations have been adapted from clinical trials or product monographs and could be considered. Hypocalcemia must be corrected before administering zoledronic acid.

**Dosage with toxicity**

Dosage in myelosuppression: No dosage adjustment required

<table>

CCO Formulary - June 2017
Acquired Fanconi syndrome

Increased creatinine:

1. ≥ 44 μmol/L ↑ if normal baseline** OR
2. ≥ 88 μmol/L ↑ if abnormal at baseline OR
3. Serum creatinine > 265 μmol/L

Hold until recovered to within 10% of baseline (see table for dose adjustment for renal impairment at baseline)

**normal baseline creatinine is defined as < 123 μmol/L

Hepatic Impairment

There are no pharmacokinetic data in patients with hepatic impairment. Zoledronic acid is not cleared by the liver.

Renal Impairment

Dosage in the Elderly

Similar efficacy and safety as compared to younger patients, but use with caution due to cardiac risks or renal function impairment.
F - Adverse Effects

Refer to zoledronic acid drug monograph(s) for additional details of adverse effects

G - Interactions

Refer to zoledronic acid drug monograph(s) for additional details

- Caution and monitor with drugs that cause hypocalcemia (e.g. aminoglycosides, loop diuretics, calcitonin)
- Caution and monitor with drugs that cause renal dysfunction (e.g. NSAIDs, ACE inhibitors)
- Avoid in patients with hypersensitivity to ASA given possible increased risk of bronchospasm (theoretical)
- Caution with antiangiogenic drugs (e.g. sunitinib, bevacizumab) given increased risk of ONJ

back to top

H - Drug Administration and Special Precautions

Refer to zoledronic acid drug monograph(s) for additional details
Administration:

- Do not infuse over a duration of less than 15 minutes.
- All patients should be adequately hydrated prior to and after administration of zoledronic acid, but overhydration should be avoided.
- Mix with 100 mL solution (D5W or NS) and infuse over ≥ 15 minutes.
- Do not mix with calcium or other divalent cation-containing solutions.
- Compatible with PVC, glass, polyethylene and polypropylene containers or infusion lines.
- Should be administered as a single intravenous solution in a line separate from all other drugs.
- Store unopened vials at room temperature.

Contraindications:

- Patients who have a hypersensitivity to this drug or any of its components, or other bisphosphonates
- Patients with non-corrected hypocalcemia at time of infusion or severe renal failure
- Zoledronic acid should not be given together with other bisphosphonates since the combined effects of these agents are unknown

Other Warnings/Precautions:

- The use of zoledronic acid with other nephrotoxins, doses > 4mg, infusion duration under 15 minutes, and previous bisphosphonate use are associated with an increased risk of renal failure.
- Use with caution in patients with cardiac failure, especially in the elderly.
- Use with caution in patients with risk factors for ONJ, including patients receiving concomitant chemotherapy or anti-angiogenic agents; patients should be advised to avoid invasive dental procedures while receiving zoledronic acid.
- Caution in patients who have had thyroid surgery since they are susceptible to hypocalcaemia due to relative hypoparathyroidism.

I - Recommended Clinical Monitoring

Treating physicians may decide to monitor more or less frequently for individual patients but should always consider recommendations from the product monograph.

Recommended Clinical Monitoring

- Renal function tests (serum creatinine and BUN); baseline, before each dose and during therapy, as indicated
- Calcium, corrected levels (including serum albumin), electrolytes (including phosphate, magnesium); baseline, before each dose and during therapy, as indicated
- CBC; baseline and as clinically indicated
• Comprehensive dental evaluation of both hard and soft tissues before starting bisphosphonate treatment; undergo invasive dental procedures, if needed, before starting bisphosphonate treatment; regular check-ups
• Clinical toxicity assessment for flu-like syndrome, dental, signs of acquired Fanconi syndrome, musculoskeletal and ocular symptoms; at each visit
• Grade toxicity using the current NCI-CTCAE (Common Terminology Criteria for Adverse Events) version

Suggested Clinical Monitoring

• Ophthalmology examination with ocular symptoms; as clinically indicated

M - Disclaimer

Refer to the New Drug Funding Program or Ontario Public Drug Programs websites for the most up-to-date public funding information.

The information set out in the drug monographs, regimen monographs, appendices and symptom management information (for health professionals) contained in the Drug Formulary (the "Formulary") is intended for healthcare providers and is to be used for informational purposes only. The information is not intended to cover all possible uses, directions, precautions, drug interactions or adverse effects of a particular drug, nor should it be construed to indicate that use of a particular drug is safe, appropriate or effective for a given condition. The information in the Formulary is not intended to constitute or be a substitute for medical advice and should not be relied upon in any such regard. All uses of the Formulary are subject to clinical judgment and actual prescribing patterns may not follow the information provided in the Formulary.

The format and content of the drug monographs, regimen monographs, appendices and symptom management information contained in the Formulary will change as they are reviewed and revised on a periodic basis. The date of last revision will be visible on each page of the monograph and regimen. Since standards of usage are constantly evolving, it is advised that the Formulary not be used as the sole source of information. It is strongly recommended that original references or product monograph be consulted prior to using a chemotherapy regimen for the first time.

Some Formulary documents, such as the medication information sheets, regimen information sheets and symptom management information (for patients), are intended for patients. Patients should always consult with their healthcare provider if they have questions regarding any information set out in the Formulary documents.

While care has been taken in the preparation of the information contained in the Formulary, such information is provided on an "as-is" basis, without any representation, warranty, or condition, whether express, or implied, statutory or otherwise, as to the information’s quality, accuracy, currency, completeness, or reliability.

CCO and the Formulary’s content providers shall have no liability, whether direct, indirect, consequential, contingent, special, or incidental, related to or arising from the information in the Formulary or its use thereof, whether based on breach of contract or tort (including negligence), and even if advised of the possibility thereof. Anyone using the information in the Formulary does so at his or her own risk, and by using such information, agrees to indemnify CCO and its content providers from any and all liability, loss, damages, costs and expenses (including legal fees and expenses) arising from such person’s use of the information in the Formulary.

Any use of the information is subject, at all times, to CCO’s Terms and Conditions.
