

Borderline Epithelial Ovarian Tumour Treatment and Follow-up Pathway Map

Version 2018.06

Possible

Target Population

Women presenting with borderline epithelial ovarian tumours

Pathway Map Considerations

- For more information about the optimal organization of gynecologic oncology services in Ontario refer to EBS #4-11
- The staging system used throughout the Ovarian Cancer Treatment Pathway is the 2014 FIGO staging system.
- Primary care providers play an important role in the cancer journey and should be informed of relevant tests and consultations.Ongoing care with a primary care provider is assumed to be part of the pathway map. For patients who do not have a primary care provider, Health Care Connect, is a government resource that helps patients find a doctor or nurse practitioner.
- Throughout the pathway map, a shared decision-making model should be implemented to enable and encourage patients to play an active role in the management of their care. For more information see Person-Centered Care Guideline and EBS #19-2 Provider-Patient Communication*
- Hyperlinks are used throughout the pathway map to provide information about relevant CCO tools, resources and guidance documents.
- The term 'healthcare provider', used throughout the pathway map, includes primary care providers and specialists, e.g. family doctors, nurse practitioners, gynecologists, midwives and emergency physicians.
- For more information on Multidisciplinary Cancer Conferences visit MCC Tools
- For more information on wait time prioritization, visit: **Surgery**
- Clinical trials should be considered for all phases of the pathway map.
- Psychosocial oncology (PSO) is the interprofessional specialty concerned with understanding and treating the social, practical, psychological, emotional, spiritual and functional needs and quality-of-life impact that cancer has on patients and their families. Psychosocial care should be considered an integral and standardized part of cancer care for patients and their families at all stages of the illness trajectory. For more information, visit EBS #19-3*
- The following should be considered when weighing the treatment options described in this pathway map for patients with potentially life-limiting illness:
 - Palliative care may be of benefit at any stage of the cancer journey, and may enhance other types of care including restorative or rehabilitative care or may become the total focus of care
 - Ongoing discussions regarding goals of care is central to palliative care, and is an important part of the decision-making process. Goals of care discussions include the type, extent and goal of a treatment or care plan, where care will be provided, which health care providers will provide the care, and the patient's overall approach to care
