

Breast Cancer Well Follow-up Pathway Map

Version 2015.11

Target Population

Breast cancer patients who have completed primary treatment for breast cancer and are without evidence of disease, but would potentially be candidates for further treatment if recurrence or new breast cancer were detected.

Pathway Map Considerations

- Follow-up care can be delivered in the institution or by primary care. Institutional follow-up care may be delivered by oncologist, general practitioner in oncology or an advanced practice nurse (e.g., nurse practitioner, clinical nurse specialist).
- Primary care providers play an important role in the cancer journey and should be informed of relevant tests and consultations. Ongoing care with a primary care provider is assumed to be part of the pathway map. For patients who do not have a primary care provider, [Health Care Connect](#), is a government resource that helps patients find a family doctor or nurse practitioner.
- Throughout the pathway map, a shared decision-making model should be implemented to enable and encourage patients to play an active role in the management of their care. For more information see [Person-Centered Care Guideline](#) and [EBS #19-2 Provider-Patient Communication*](#)
- Hyperlinks are used throughout the pathway map to provide information about relevant CCO tools, resources and guidance documents.
- The term 'health care provider', used throughout the pathway map, includes primary care providers and specialists, nurse practitioners, and emergency physicians.

* Note. [EBS #19-2](#) is older than 3 years and is currently listed as 'For Education and Information Purposes'. This means that the recommendations will no longer be maintained but may still be useful for academic or other information purposes.

Pathway Map Disclaimer

This pathway map is a resource that provides an overview of the treatment that an individual in the Ontario cancer system may receive.

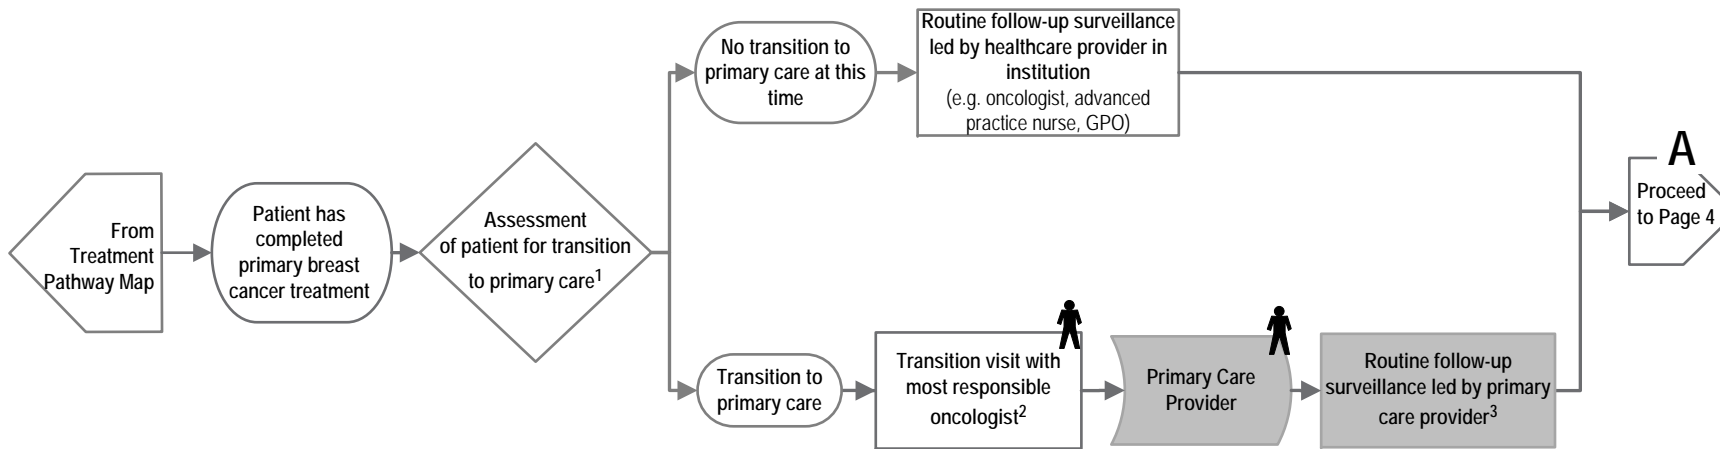

The pathway map is intended to be used for informational purposes only. The pathway map is not intended to constitute or be a substitute for medical advice and should not be relied upon in any such regard. Further, all pathway maps are subject to clinical judgment and actual practice patterns may not follow the proposed steps set out in the pathway map. In the situation where the reader is not a healthcare provider, the reader should always consult a healthcare provider if he/she has any questions regarding the information set out in the pathway map. The information in the pathway map does not create a physician-patient relationship between Cancer Care Ontario (CCO) and the reader.

While care has been taken in the preparation of the information contained in the pathway map, such information is provided on an "as-is" basis, without any representation, warranty, or condition, whether express, or implied, statutory or otherwise, as to the information's quality, accuracy, currency, completeness, or reliability.

CCO and the pathway map's content providers (including the physicians who contributed to the information in the pathway map) shall have no liability, whether direct, indirect, consequential, contingent, special, or incidental, related to or arising from the information in the pathway map or its use thereof, whether based on breach of contract or tort (including negligence), and even if advised of the possibility thereof. Anyone using the information in the pathway map does so at his or her own risk, and by using such information, agrees to indemnify CCO and its content providers from any and all liability, loss, damages, costs and expenses (including legal fees and expenses) arising from such person's use of the information in the pathway map.

This pathway map may not reflect all the available scientific research and is not intended as an exhaustive resource. CCO and its content providers assume no responsibility for omissions or incomplete information in this pathway map. It is possible that other relevant scientific findings may have been reported since completion of this pathway map. This pathway map may be superseded by an updated pathway map on the same topic.

Further, all pathways are subject to clinical judgment and actual practice patterns may not follow the proposed steps set out in the pathway. In the situation where the reader is not a healthcare provider, the reader should always consult a healthcare provider if he/she has any questions regarding the information set out in the pathway. The information in the pathway does not create a physician-patient relationship between Cancer Care Ontario (CCO) and the reader.

¹ A patient is considered to be ready for transition to primary care if they have completed chemotherapy and/or radiation and/or surgery (hormone therapy may still be ongoing) and have no signs or symptoms of recurrence. Before a transition, it should be confirmed that patients have a family health care provider. For patients who do not have a primary care provider, [Health Care Connect](#), is a government resource that helps patients find a doctor or nurse practitioner.

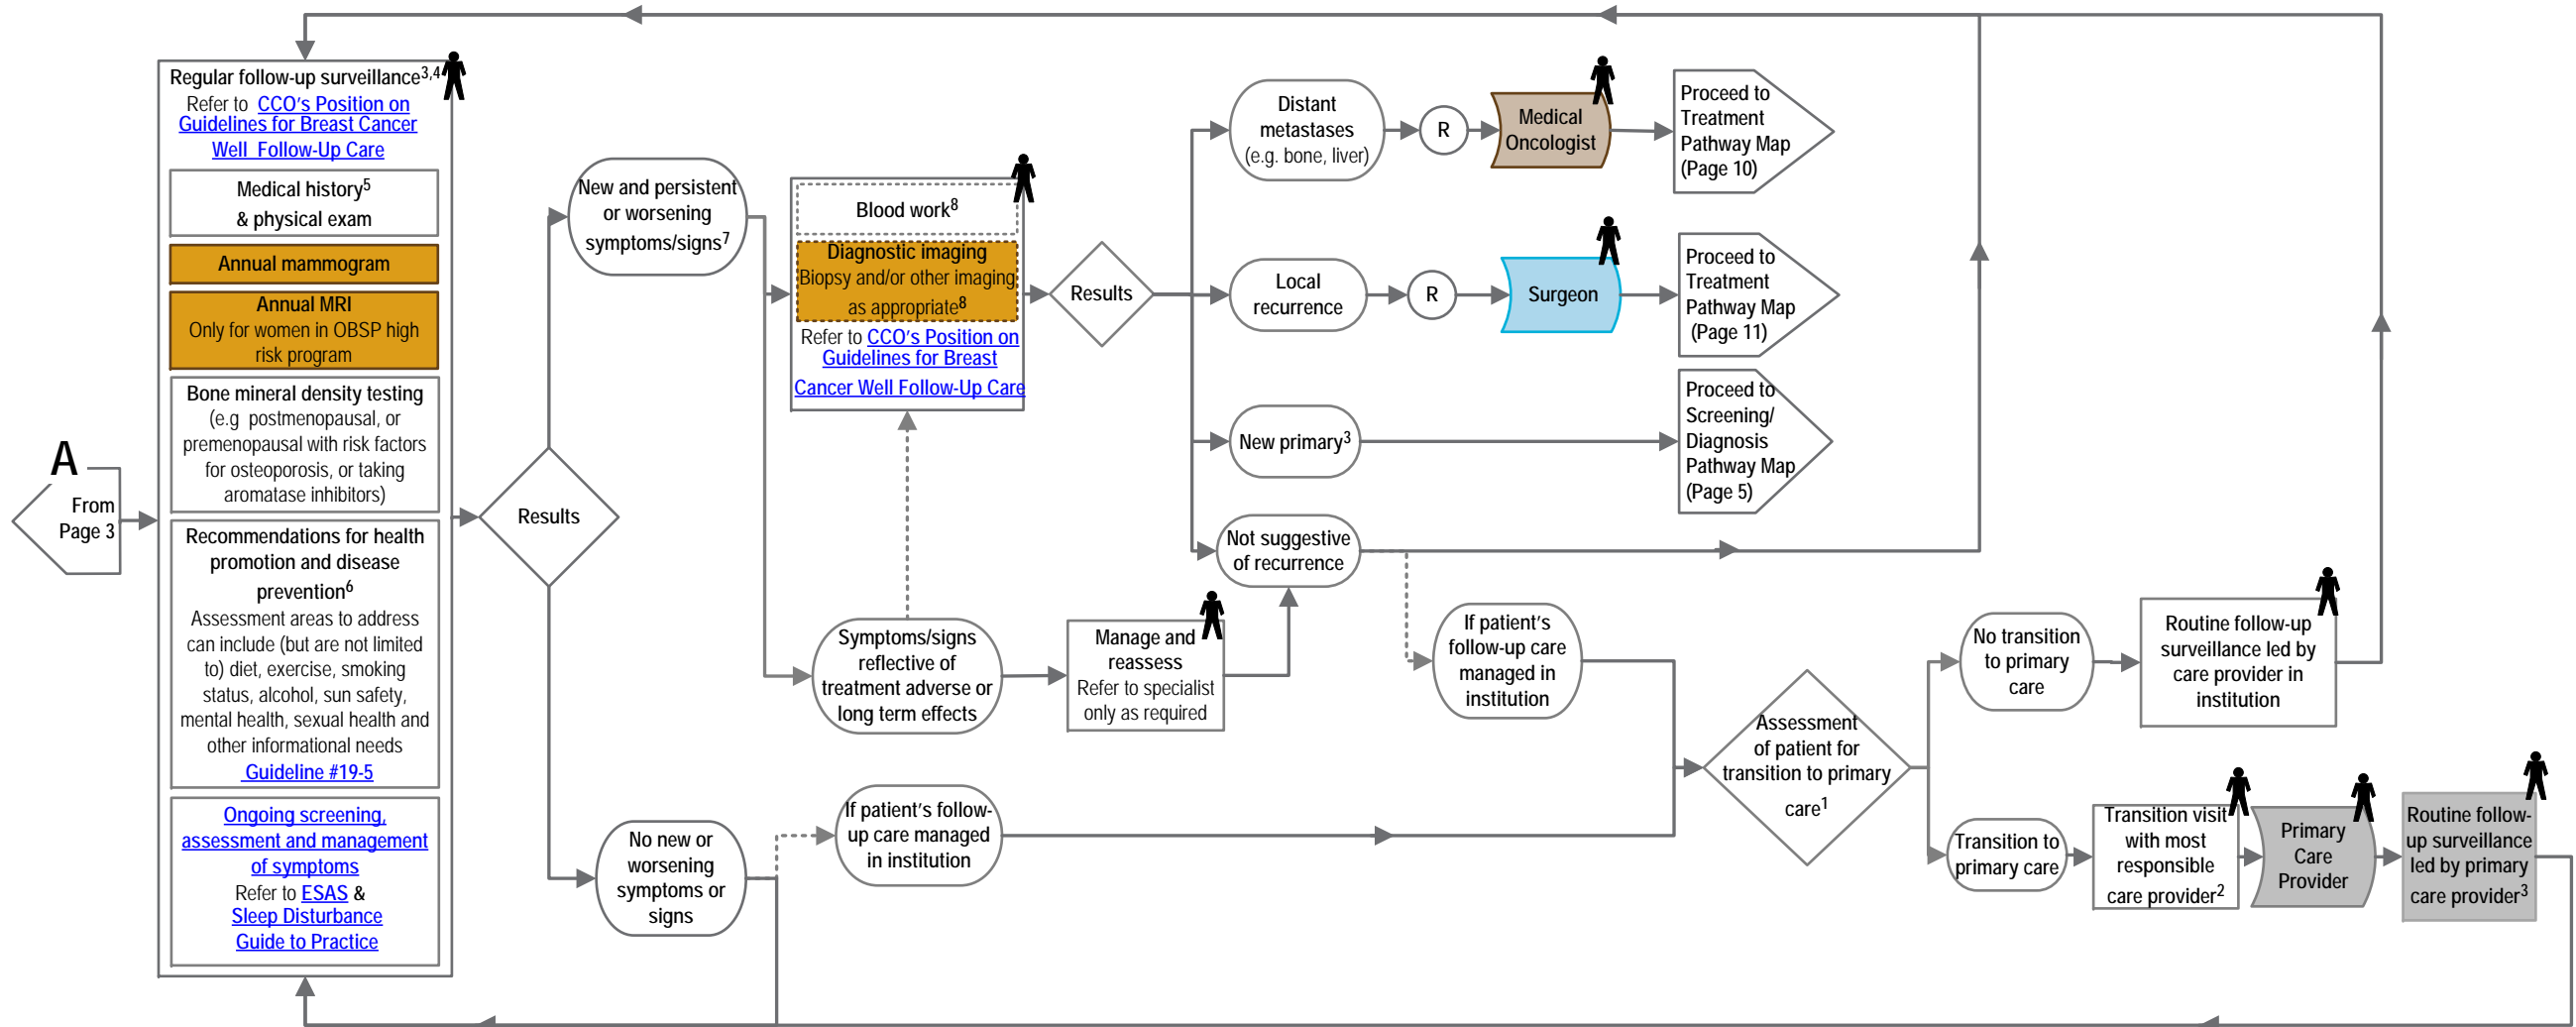

² For improved transition, a successful handover will include a summary of cancer related care, a needs assessment and recommendations for ongoing care and follow-up care (e.g. survivorship care plan), as well as information for re-referral into cancer program if needed. Refer to [CCO's Position on Guideline for Breast Cancer Well Follow-Up Care](#).

³ A mechanism to recall patients for reassessment by oncologist is strongly encouraged if new treatment options become available after patient has transitioned to primary care.

Breast Cancer Well Follow-up Care Pathway Map

Care of Individuals Who Have Completed Primary Treatment

The pathway is intended to be used for informational purposes only. The pathway is not intended to constitute or be a substitute for medical advice and should not be relied upon in any such regard. Further, all pathways are subject to clinical judgment and actual practice patterns may not follow the proposed steps set out in the pathway. In the situation where the reader is not a healthcare provider, the reader should always consult a healthcare provider if he/she has any questions regarding the information set out in the pathway. The information in the pathway does not create a physician-patient relationship between Cancer Care Ontario (CCO) and the reader.

¹ A patient is considered to be ready for transition to primary care if they have completed chemotherapy and/or radiation and/or surgery (hormone therapy may still be ongoing) and have no signs or symptoms of recurrence. Before a transition, it should be confirmed that patients have a primary care provider. For patients who do not have a primary care provider, [Health Care Connect](#), is a government resource that helps patients find a doctor or nurse practitioner.

² For improved transition, a successful handover will include a summary of cancer related care, a needs assessment and recommendations for ongoing care and follow-up care (e.g. survivorship care plan), as well as information for re-referral into cancer program if needed. For more information see [CCO's Position on Guideline for Breast Cancer Well Follow-Up Care](#).

³ A mechanism to recall patients at the institutional level is strongly encouraged if there is a recommended change in treatment practice.

⁴ Frequency of visits should be adjusted according to the individual patient's needs. However, patients should be advised to report symptoms as soon as possible. Refer to 'Grunfeld, E., Dhesy-Thind, S. & Levine, M. (2005). Clinical practice guidelines for the care and treatment of breast cancer: Follow-up after treatment for breast cancer (summary of the 2005 update). CMAJ 172(10): 1319-1320.

⁵ Patients should be asked about changes in family history to determine if a genetics referral is appropriate. For women who are taking Tamoxifen, it is important to ask about vaginal bleeding/menstrual status.

⁶ Patients may be advised by institutional provider, however care delivery may be shared with the primary care provider.

⁷ Consider common long term side effects (e.g. fatigue, anxiety etc.) and late side effects (e.g. lymphedema, cardio-toxicity etc.) and potential secondary malignancies (e.g., leukemia etc.).

⁸ Patients with a clinical examination revealing high suspicion should have an expedited referral to specialist without waiting for test results.
