Ovarian Cancer Diagnosis Pathway Map
Version 2018.06

Disclaimer
The pathway map is intended to be used for informational purposes only. The pathway map is not intended to constitute or be a substitute for medical advice and should not be relied upon in any such regard. Further, all pathway maps are subject to clinical judgment and actual practice patterns may not follow the proposed steps set out in the pathway map. In the situation where the reader is not a healthcare provider, the reader should always consult a healthcare provider if he/she has any questions regarding the information set out in the pathway map. The information in the pathway map does not create a physician-patient relationship between Cancer Care Ontario (CCO) and the reader.
Ovarian Cancer Diagnosis Pathway Map

Target Population

- The pathway map reflects the clinical management of women with signs or symptoms suspicious for epithelial ovarian cancer.
- These women are in need of diagnostic work-up.

Pathway Map Considerations

- For additional information about the optimal organization of gynecologic oncology services in Ontario refer to EBS #4-11.
- The term ‘healthcare provider’, used throughout the pathway map, includes primary care providers and specialists, e.g. family doctors, nurse practitioners, gynecologists, midwives and emergency physicians.
- Primary care providers play an important role in the cancer journey and should be informed of relevant tests and consultations. Ongoing care with a primary care provider is assumed to be part of the pathway map. For patients who do not have a primary care provider, Health Care Connect is a government resource that helps patients find a doctor or nurse practitioner.
- Throughout the pathway map, a shared decision-making model should be implemented to enable and encourage patients to play an active role in the management of their care. For more information see Person-Centered Care Guideline and EBS #19-3 Provider-Patient Communication*
- Hyperlinks are used throughout the pathway map to provide information about relevant CCO tools, resources and guidance documents.
- Psychosocial oncology (PSO) is the interprofessional specialty concerned with understanding and treating the social, practical, psychological, emotional, spiritual and functional needs and quality-of-life impact that cancer has on patients and their families. Psychosocial care should be considered an integral and standardized part of cancer care for patients and their families at all stages of the illness trajectory. For more information, visit EBS #19-3*

Pathway Map Legend

- **Primary Care**
- **Palliative Care**
- **Pathology**
- **Gynecologic Oncology**
- **Radiation Oncology**
- **Medical Oncology**
- **Radiology**
- **Gynecology**
- **Multidisciplinary Cancer Conference (MCC)**

Shape Guide

- **Intervention**
- **Decision or assessment point**
- **Patient (disease) characteristics**
- **Consultation with specialist**
- **Exit pathway**
- **Off-page reference**
- **Patient/Provider interaction**
- **Referral**
- **Wait time indicator time point**

Line Guide

- **Required**
- **Possible**

Pathway Map Disclaimer

This pathway map is a resource that provides an overview of the treatment that an individual in the Ontario cancer system may receive. The pathway map is intended to be used for informational purposes only. The pathway map is not intended to constitute or be a substitute for medical advice and should not be relied upon in any such regard. Further, all pathway maps are subject to clinical judgment and actual practice patterns may not follow the proposed steps set out in the pathway map. In the situation where the reader is not a healthcare provider, the reader should always consult a healthcare provider if he/she has any questions regarding the information set out in the pathway map. The information in the pathway map does not create a physician-patient relationship between Cancer Care Ontario (CCO) and the reader.

While care has been taken in the preparation of the information contained in the pathway map, such information is provided on an “as-is” basis, without any representation, warranty, or condition, whether express, or implied, statutory or otherwise, as to the information’s quality, accuracy, completeness, or reliability. CCO and the pathway map’s content providers (including the physicians who contributed to the information in the pathway map) shall have no liability, whether direct, indirect, consequential, contingent, special, or incidental, related to or arising from the information in the pathway map or its use thereof, whether based on breach of contract or tort (including negligence), and even if advised of the possibility thereof. Anyone using the information in the pathway map does so at his or her own risk, and by using such information, agrees to indemnify CCO and its content providers from any and all liability, loss, damages, costs and expenses (including legal fees and expenses) arising from such person’s use of the information in the pathway map.

This pathway map may not reflect all the available scientific research and is not intended as an exhaustive resource. CCO and its content providers assume no responsibility for omissions or incomplete information in this pathway map. It is possible that other relevant scientific findings may have been reported since completion of this pathway map. This pathway map may be superseded by an updated pathway map on the same topic.

* Note. EBS #19-2 and EBS #19-3 are older than 3 years and are currently listed as ‘For Education and Information Purposes’. This means that the recommendations will no longer be maintained but may still be useful for academic or other information purposes.

Screen for psychosocial needs, and assessment and management of symptoms. Click here for more information about symptom assessment and management tools.

Risk of Malignancy Index (RMI) = \( U \times M \times CA\ 125 \)

Refer to EBS 84-15

<table>
<thead>
<tr>
<th>U (Ultrasound)</th>
<th>M (Menopausal status)</th>
<th>CA 125 (Cancer antigen 125)</th>
</tr>
</thead>
<tbody>
<tr>
<td>U = 1 if ultrasound has 0 or 1 features present</td>
<td>M = 1 for premenopausal women</td>
<td>Absolute serum measurement (U/mL)</td>
</tr>
<tr>
<td>U = 4 if ultrasound has 2 or more features present</td>
<td>M = 4 for postmenopausal women</td>
<td>CA 125 (Cancer antigen 125)</td>
</tr>
</tbody>
</table>

1 The classification of post-menopausal is a woman who has not had her period for more than 1 year or a woman over 50 who has had a hysterectomy.

2 Consider a referral to a medical oncologist, hepato-pancreato-biliary surgeon, and/or gastroenterologist as appropriate.

Screen for psychosocial needs, and assessment and management of symptoms. Click here for more information about symptom assessment and management tools.

1 There is a lack of guidance indicating the appropriate time interval as to when ultrasound and RMI assessment should be repeated.

2 If appropriate, seek a second opinion from a gynecological oncologist.
