Serous Epithelial Ovarian Cancer Treatment and Follow-up Pathway Map
Version 2020.01

Disclaimer
The pathway map is intended to be used for informational purposes only. The pathway map is not intended to constitute or be a substitute for medical advice and should not be relied upon in any such regard. Further, all pathway maps are subject to clinical judgment and actual practice patterns may not follow the proposed steps set out in the pathway map. In the situation where the reader is not a healthcare provider, the reader should always consult a healthcare provider if he/she has any questions regarding the information set out in the pathway map. The information in the pathway map does not create a physician-patient relationship between Ontario Health (Cancer Care Ontario) and the reader.
Target Population

- Women presenting with epithelial ovarian cancer

Pathway Map Considerations

- For more information about the optimal organization of gynecologic oncology services in Ontario refer to EBS #4-11
- The staging system used throughout the Ovarian Cancer Treatment Pathway Map is the 2014 FIGO staging system.
- Primary care providers play an important role in the cancer journey and should be informed of relevant tests and consultations. Ongoing care with a primary care provider is assumed to be part of the pathway map. For patients who do not have a primary care provider, Health Care Connect is a government resource that helps patients find a doctor or nurse practitioner.
- Throughout the pathway map, a shared decision-making model should be implemented to enable and encourage patients to play an active role in the management of their care. For more information see Person-Centered Care Guideline and EBS #19-2 Provider-Patient Communication.
- Hyperlinks are used throughout the pathway map to provide information about relevant Ontario Health (Cancer Care Ontario) tools, resources and guidance documents.
- The term ‘healthcare provider’, used throughout the pathway map, includes primary care providers and specialists, e.g. family doctors, nurse practitioners, gynecologists, midwives and emergency physicians.
- For more information on Multidisciplinary Cancer Conferences visit MCC.Tools
- For more information on wait time prioritization, visit: Surgery
- Clinical trials should be considered for all phases of the pathway map.
- Psychosocial oncology (PSO) is the interprofessional specialty concerned with understanding and treating the social, practical, psychological, emotional, spiritual and functional needs and quality-of-life impact that cancer has on patients and their families. Psychosocial care should be considered an integral and standardized part of cancer care for patients and their families at all stages of the illness trajectory. For more information, visit EBS #19-3.*
- The following should be considered when weighing the treatment options described in this pathway map for patients with potentially life-limiting illness:
  - Palliative care may be of benefit at any stage of the cancer journey, and may enhance other types of care – including restorative or rehabilitative care – or may become the total focus of care
  - Ongoing discussions regarding goals of care is central to palliative care, and is an important part of the decision-making process. Goals of care discussions include the type, extent and goal of a treatment or care plan, where care will be provided, which health care providers will provide the care, and the patient’s overall approach to care

* Note: EBS #19-2 and EBS #19-3 are older than 3 years and are currently listed as ‘For Education and Information Purposes’. This means that the recommendations will no longer be maintained but may still be useful for academic or other information purposes.

Pathway Map Preamble

This pathway map is a resource that provides an overview of the treatment that an individual in the Ontario cancer system may receive.

The pathway map is intended to be used for informational purposes only. The pathway map is not intended to constitute or be a substitute for medical advice and should not be relied upon in any such regard. Further, all pathway maps are subject to clinical judgment and actual practice patterns may not follow the proposed steps set out in the pathway map. In the situation where the reader is not a healthcare provider, the reader should always consult a healthcare provider if he/she has any questions regarding the information set out in the pathway map. The information in the pathway map does not create a physician-patient relationship between Ontario Health (Cancer Care Ontario) and the reader.

While care has been taken in the preparation of the information contained in the pathway map, such information is provided on an “as-is” basis, without any representation, warranty, or condition, whether express, or implied, statutory or otherwise, as to the information’s quality, accuracy, currency, completeness, or reliability.

Ontario Health (Cancer Care Ontario) and the pathway map’s content providers (including the physicians who contributed to the information in the pathway map) shall have no liability, whether direct, indirect, consequential, contingent, special, or incidental, related to or arising from the information in the pathway map or its use thereof, whether based on breach of contract or tort (including negligence), and even if advised of the possibility thereof. Anyone using the information in the pathway map does so at his or her own risk, and by using such information, agrees to indemnify Ontario Health (Cancer Care Ontario) and its content providers from any and all liability, loss, damages, costs and expenses (including legal fees and expenses) arising from such person’s use of the information in the pathway map.

This pathway map may not reflect all the available scientific research and is not intended as an exhaustive resource. Ontario Health (Cancer Care Ontario) and its content providers assume no responsibility for omissions or incomplete information in this pathway map. It is possible that other relevant scientific findings may have been reported since completion of this pathway map. This pathway map may be superseded by an updated pathway map on the same topic.
The pathway map is intended to be used for informational purposes only. The pathway map is not intended to constitute or be a substitute for medical advice and should not be relied upon in any such regard. Further, all pathway maps are subject to clinical judgment and actual practice patterns may not follow the proposed steps set out in the pathway map. In the situation where the reader is not a healthcare provider, the reader should always consult a healthcare provider if he/she has any questions regarding the information set out in the pathway map. The information in the pathway map does not create a physician-patient relationship between Ontario Health (Cancer Care Ontario) and the reader.

Screen for psychosocial needs, and assessment and management of symptoms. [Click here for more information about symptom assessment and management tools](#)

Consider the introduction of palliative care, early and across the cancer journey [Click here for more information about palliative care](#)

---

1. Discussion to be individualized for each patient; however, may include the following: age, fertility preservation, hormone replacement therapy, referral for infertility consultation, etc.
2. Pathologists with a specialty or special interest in gynecologic pathology
3. If appropriate, the option of fertility sparing surgery should be discussed with the patient
4. Referral to genetics for BRCA testing for all high grade serous epithelial ovarian cancer
5. BRCA reflex testing should be performed on tumours from all newly diagnosed patients with high grade serous ovarian, fallopian tube or primary peritoneal cancer, to determine eligibility for the drug olaparib
Low Grade

Screen for psychosocial needs, and assessment and management of symptoms. Click here for more information about symptom assessment and management tools

Consider the introduction of palliative care, early and across the cancer journey Click here for more information about palliative care

High Grade

1. Referral to genetics for BRCA testing for all high grade serous epithelial ovarian cancer
Consider the introduction of palliative care, early and across the cancer journey. Click here for more information about symptom assessment and management tools.
Screen for psychosocial needs, and assessment and management of symptoms. Click here for more information about symptom assessment and management tools.

Follow-Up and Surveillance
Every 3 to 4 months (Year 1 and 2)
Every 6 to 12 months (Year 3 to 5) then annually*

Physical Exam and Full Pelvic Examination

Blood Test May Include:
- CA 125
- Other Tests as Clinically indicated

CT Abdomen Pelvis
CT Chest
Chest X-Ray
Blood Test To Include CA 125

Results

Progression or recurrence

No Progression or recurrence

Suspicion of Progression or recurrence

CT Abdomen Pelvis
CT Chest

Follow-Up and Surveillance

Patients who have completed primary treatment and have stable, partial or complete response to therapy

Genetics Clinic 2
If not previously done

Referral to genetics for BRCA testing for all high grade serous epithelial ovarian cancer

Annual follow-up by gynecologist, family doctor or gynecologic oncologist.
Serous Epithelial Ovarian Cancer Treatment and Follow-up Pathway Map

Recurrence & Persistent Disease

From Pages 6, 7, 8, 9

---

\(^4\) Referral to genetics for BRCA testing for all high grade serous epithelial ovarian cancer

\(^5\) Consider the addition of Bevacizumab to chemotherapy for platinum resistant ovarian cancer. Refer to Ontario Health (Cancer Care Ontario) for appropriate Bevacizumab Eligibility Form

\(^1\) If not previously done, BRCA reflex testing should be performed on tumours from all newly diagnosed patients with high grade serous ovarian, fallopian tube or primary peritoneal cancer, to determine eligibility for the drug olaparib

\(^9\) PARP inhibitor as monotherapy maintenance for platinum-sensitive relapsed BRCA-mutated epithelial ovarian, fallopian tube or primary peritoneal cancer

---
End of Life Care

- Key conversations to revisit Goals of Care and to discuss and document key treatment decisions
  - Assess and address patient and family’s information needs and understanding of the disease, address gaps between reality and expectation, foster realistic hope and provide opportunity to explore prognosis and life expectancy, and preparedness for death.
  - Explore the patient’s views on medications, tests, resuscitation, intensive care and preferred location of death.
  - If a patient makes any treatment decisions relevant to their current condition (i.e., provides consent), these decisions can be incorporated into their Plan of Treatment.
  - Review Goals of Care, and patient preferences regularly, particularly when there is a change in a clinical status.

- Screen for specific end of life psychosocial issues
  - Assess and address patient and families’ loss, grief and bereavement needs including anticipatory grief, past trauma or losses, preparing children (young children, adolescents, young adults), guardianship of children, death anxiety.
  - Provide appropriate guidance, support and information to families, caregivers, and others, based on awareness of culture and needs, and make referrals to available resources and/or specialized services to address identified needs as required.
  - Identify family members at risk for abnormal/complicated grieving and connect them proactively with bereavement resources.

- Identify patients who could benefit from specialized palliative care services (consultation or transfer)
  - As patient and family/caregivers needs increase and/or change over time consult with palliative care specialists and/or other providers with additional expertise, as required. Transfer care only if needs become more extensive or complex than the current team can handle.
  - Discuss referral with the patient and their family/caregiver.

- Proactively develop and implement a plan for expected death
  - Explore place-of-death preferences and the resources required (e.g., home, hospice, palliative care unit, long term care or nursing home) to assess whether this is realistic.
  - Prepare and support the family to understand what to expect, and plan for when a loved one is actively dying, including understanding probable symptoms, as well as the processes with death certification and how to engage funeral services.
  - Discuss emergency plans with patient and family (including who to contact, and when to use or avoid Emergency Medical Services).

- Home care planning (if this is where care will be delivered)
  - Contact the patient's primary care and home and community care providers and relevant specialist physicians to ensure an effective transfer of information related to their care. If the patient is transitioning from the hospital, this should include collaborating to develop a transition plan.
  - Introduce patient and family to resources in community (e.g., respite, day hospice programs, volunteer services, support groups, etc.)
  - Connect with home and community care services early (not just in the last 2-4 weeks).
  - Ensure resources and services are in place to support the patient and their family/caregiver, and address identified needs.
  - Anticipate/plan for pain and symptom management, including consideration for a Symptom Response Kit to facilitate access to pain, dyspnea, and delirium medication for emergency purposes.
  - If the patient consents to withholding cardiopulmonary resuscitation, A ‘Do Not Resuscitate’ order must be documented in their medical record, and a Do Not Resuscitate Confirmation (DNR-C) Form should be completed. This form should be readily accessible in the home, in order that the patient’s wishes for a natural death are respected by Emergency Medical Services.
At the time of death:
- Pronouncement of death
- Completion of death certificate
- Allow family members to spend time with loved one upon death, in such a way that respects individual rituals, cultural diversity and meaning of life and death
- Implement the pre-determined plan for expected death
- Arrange time with the family for a follow-up call or visit
- Provide age-specific bereavement services and resources
- Inform family of grief and bereavement resources/services
- Initiate grief care for family members at risk for complicated grief
- Encourage the bereaved to make an appointment with an appropriate health care provider as required

Bereavement Support and Follow-Up
- Offer psychoeducation and/or counseling to the bereaved
- Screen for complicated and abnormal grief (family members, including children)
- Consider referral of bereaved family member(s) and children to appropriate local resources, spiritual advisor, grief counselor, hospice and other volunteer programs depending on severity of grief

Provide opportunities for debriefing of care team, including volunteers

Patient Death
